Assembly and use

Choosing a clamp

WHICH CLAMP DO I NEED?

STANDARD CLAMP

Designed for standard-sized posts and most common net and sports court posts.

CLAMP FOR LARGER POSTS

Designed for larger posts or when you need adjustable fastening with a hook-and-loop strap.

BOTH CLAMPS

If you want both options available, you can choose both clamps.

Your choice will mainly depend on the type and diameter of the post where you will fit your p-marc products.

IMPORTANT

Always tighten the screw by hand without forcing it.

IMPORTANT

The clamp for larger posts is designed for posts approximately 6 to 14 cm in diameter. For larger diameters, contact p-marc: a longer hook-and-loop strap can be adapted to the post.

Assembly and use

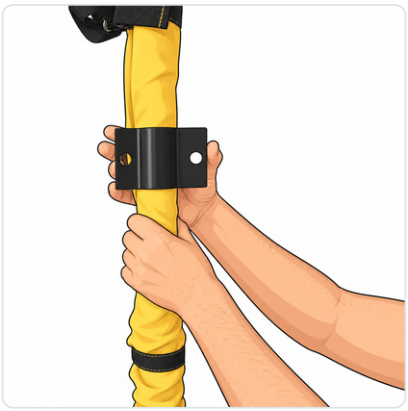

Assembly — Standard clamp

STEP 1

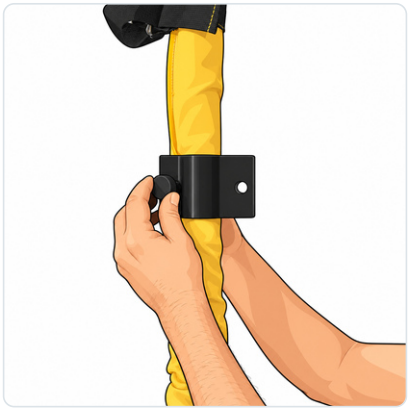

Bring the standard clamp up to the post.

STEP 2

Place it around the post and align the holes.

STEP 3

Insert the fixing screw and start turning it by hand.

STEP 4

Always tighten it by hand without forcing it.

Assembly and use

Assembly — Clamp for larger posts

STEP 1

Thread the hook-and-loop strap through one clamp handle, with the slot facing upwards, as shown.

STEP 2

Fold the strap back onto itself and secure it firmly around the handle you threaded it through.

STEP 3

Place the clamp next to the post and wrap the strap all the way around the post.

STEP 4

Thread the free end through the other handle and pull firmly until the clamp fits snugly around the post.

STEP 5

Fasten the strap onto itself. The clamp is securely attached to the post and ready to use.
